Xerox Duplicators With LightScribe Now Available

Posted Jul 28, 2008

[Print Version](#)

Page 1 of 1

A new line of Xerox DVD/CD Duplicators with LightScribe labeling capabilities features eight models that are among the most productive, reliable and cost-effective models on the market.

Suitable for the duplicating needs of any organization or business, the new models include from one to 15 writer drives and can operate independently of a PC to provide a quick and inexpensive way to make multiple copies of CDs and DVDs.

LightScribe laser labeling can be used with or without a PC and allows users to burn text or full graphic labels directly onto compatible optical discs without the need for a separate printer. The new duplicators come with the industry's first "Drag and Drop" file function that transfers image files directly from a PC to the duplicator's internal hard drive. These easy-to-use features save customers money, reducing the time and effort usually required to produce a master disc for each project.

Several models in the line also provide users with an industry-leading 256MB buffer memory for more stable and reliable high-speed duplication with a greatly reduced occurrence of buffer under-run errors.
